

### **Making a Shower Sock**

The cheapest I found was an Enware one from Benton's plumbing supplies which cost me \$150 posted to Perth. Before I had it my prep room got flooded but it works perfectly, so worth the price for me! Other prices I found were mostly over \$400.

I made my own with a shower curtain and some elastic and use that with a normal bucket. It works really well.

I have made a very primitive sort of setup for this that works for me. I just got a shower curtain from K Mart, a large bucket from Bunnings and a old trolley that nobody likes using and that what I use. Firstly I sewed the sides of the curtain closed so it formed a sock. I threaded an occy strap trough the curtain eyelets - this I use to fit the curtain sock around the head of the shower and I put the trolley with the bucket under the end opening.
